WEBB LAKE

Weld, Franklin County
U.S.G.S. Weld, Maine (7½')

Fishes

Landlocked salmon	Blacknose dace
Brown trout	Creek chub
Brook trout	Fallfish (chub)
Rainbow smelt	Pearl dace
Smallmouth bass	White sucker
White perch	Hornpout (bullhead)
Yellow perch	Redbreast sunfish
Chain pickerel	Pumpkinseed sunfish
Minnows	Slimy sculpin
Golden shiner	American eel
Common shiner	

Physical Characteristics

Area - 2146 acres

Maximum depth - 42 feet

Temperatures:

Surface - 79°F

40 feet - 60°F

Principal fisheries: Brown trout, smallmouth bass, white perch, chain pickerel

Webb Lake is located west of Mount Blue. Many small inlets enter all sides of the lake. Its outlet, the Webb River, flows south into the Androscoggin River. The lake's shoreline is largely developed.

Water quality in Webb Lake is marginal for coldwater gamefish. Good spawning and nursery habitats for salmonids are available in the tributaries, but temperature and dissolved oxygen content of the lake reach critical levels in the warm summer months. Numerous warmwater species compete with salmon and trout for food and space. The lake is stocked annually with brown trout to supplement a small wild population and provide a coldwater fishery.

Webb Lake is accessible via a boat launch site located on the west shore in Mount Blue State Park. The lake is open to fishing in both the summer and winter seasons.

Surveyed - September, 1940
